OBJECTIVE

Forward Deployed Engineer shipping production AI for external enterprise clients from discovery through go-live. Moves fluidly between senior stakeholders, engineers, and end users, holds detail under pressure, and prioritizes measurable customer outcomes.

EXPERIENCE

2025 - 2026

M1 SHIPPING

NEWARK, NJ

Forward Deployed Engineer

Embedded with external enterprise clients across five facilities to take an AI load-sequencing engine from first stakeholder interview to production in two countries, owning discovery, build, deployment, and incident response.

- Led a five-person engineering team encoding a Dubai planner's undocumented logic into production across 12 US and UAE warehouses, sequencing 100 vehicles a day and cutting manual resolution time 60%, live seven weeks after the first stakeholder interview.
- Grew customer daily loading revenue from \$20K to \$50K by expanding the deployment from a single pilot site to 12, returning on site to rework the workflow when adoption dropped after launch.
- Owned customer-facing integration end to end: Copart auction API, a Python VIN and QR intake pipeline, and 15+ REST integrations supporting 500+ daily transactions.
- Deployed TypeScript and Express tracking services across two production regions at 99% uptime, cut API latency 45% through SQL optimization, and served as sole technical contact for incident response.
- Gated each release on an evaluation suite with guardrails and multi-model fallbacks, and fed recurring field requests into the roadmap so they became platform capability rather than one-off patches.

2023 - 2024

HOLISOL LOGISTICS

NEW DELHI, INDIA

Associate Software Engineer

Delivered supply chain software across 15+ concurrent enterprise client engagements, gathering requirements directly from operations leadership and deploying into live warehouse environments.

- Built and field-deployed HoliConnect BLE, an event-driven telemetry platform on Raspberry Pi gateways processing 10,000+ events a day to track 200+ workers across three live customer facilities, with no downtime window.
- Diagnosed production telemetry corruption on site and designed a MongoDB reconciliation service that restored 99% event integrity with zero data loss, recovering two months of reporting data through a zero-downtime Docker migration.
- Authored 30+ REST endpoints across five platforms and shipped Logiastro, a Next.js delivery platform serving 500+ daily deliveries and cutting delivery time 22%.
- Delivered Filuet.com for a third-party logistics multinational operating across 19 markets, working with client stakeholders from scoping through launch and cutting page load times 32%.
- Integrated a Python and Django internal tooling platform used across three departments, cutting manual workflow time 40% by embedding with each team before writing code.
- Engineered CI/CD pipelines with Terraform and Docker across 10+ microservices, reducing deployment time from 30 minutes to under five and doubling release frequency at 100% uptime.

2022 - 2023

HCLTECH

NEW DELHI, INDIA

Full-Stack Developer Intern

Delivered client-facing web applications and internal tooling on distributed Agile teams, working remotely across multiple concurrent client projects.

- Delivered five client-facing CMS dashboards, improving page load performance, mobile responsiveness, and cross-device compatibility.
- Built Python barcode scanning tools that cut manual data entry effort 40 to 50% in daily operational workflows.
- Contributed full-stack development in React, Node.js, Python, and SQL across three internal and client-facing projects.

PROJECTS

2025 - Present

SHELBY AI

INDEPENDENT

Founder and Sole Engineer | github.com/kuxhaan7/Shelby-AI

Built a production AI agent platform from an empty repository to a product with paying customers, Junction Drugs LLC and Drugdroprx, who run daily operations on it, powered by a Retrieval-Augmented Generation (RAG) pipeline over ChromaDB.

- Shipped one deployed service exposing a web chat interface and a Telegram bot, with a 26-tool Claude function-calling loop, ChromaDB retrieval memory, a runtime skill registry the agent extends itself, voice input and output, and vision.
- Rebuilt the data-quality pipeline as a LangGraph state machine routing on trustworthiness rather than the output score, after finding aggressive imputation could reach a perfect result by inventing values; it quarantines unrecoverable rows and re-scores only genuine data, taking a broken enterprise export to 100%.
- Diagnoses 7 classes of data defect and added schema drift detection that flags column and type changes on recurring exports before bad data reaches anything downstream.
- Connected external systems through runtime Model Context Protocol connectors and incoming webhooks, and gated releases on a LangSmith evaluation suite scoring 1.00 faithfulness and 1.00 relevance across 27 structural tests.
- Migrated the platform to Google Cloud with Terraform so multi – tenant environments rebuild from a single definition.

SKILLS

LANGUAGES	Python, TypeScript, JavaScript, SQL, Java, Go, Bash.
AI	LLM agents and agentic deployment, LangGraph, LangChain, LangSmith evaluation, Model Context Protocol, retrieval augmented generation, vector databases, document parsing and structured extraction, prompt engineering, Anthropic Claude API, Amazon Bedrock, PyTorch.
ENGINEERING	FastAPI, Node.js, Express, Django, React, Next.js, REST and GraphQL APIs, microservices, event-driven architecture, PostgreSQL, MongoDB, ChromaDB, ETL pipelines.
CLOUD	Amazon Web Services, Google Cloud Platform, Terraform, Docker, Kubernetes, GitLab CI/CD, Grafana, Prometheus.
PRACTICE	On-site customer embedding, requirements discovery, end-to-end delivery ownership, user training, incident response, Claude Code with parallel agent sessions.

EDUCATION

2024 - 2026	MONTCLAIR STATE UNIVERSITY Candidate for Master of Science in Computer Science and Artificial Intelligence, May 2026. Coursework in machine learning, distributed systems, and database systems.	MONTCLAIR, NJ
2019 - 2023	PUNJAB TECHNICAL UNIVERSITY Bachelor of Technology in Computer Engineering.	PUNJAB, INDIA

PERSONAL

Authorized to work in the United States on an EAD with no visa sponsorship required. Open to relocation and customer travel. Certifications in Retrieval Augmented Generation (DeepLearning.AI), Non-Human Identity Fundamentals (Oasis Security), and Big Data, Artificial Intelligence and Ethics, (University of California Davis).
